

## Desktop Unit

Verus is a new range of devices from Innovia Systems specifically designed to authenticate Innovia Films Clarity™C Balanced Biaxially Oriented Polypropylene (BBOPP) film manufactured using their unique 'bubble' process. Clarity™C is the base material for all Guardian® polymer banknote substrate, manufactured by Innovia Security.

Verus devices can detect the unique physical and optical characteristics of Clarity™C film. This means that if the note inserted into the device does not match these features, Verus will display a red light and produce an audible alert. Verus is therefore able to detect and confirm Clarity™C film, with any other unknown or suspicious polymer film types clearly being outsourced for further checking. Verus devices offer a high level of validation of the substrate and can be used as part of a broader security strategy. This in turn can build public and banking confidence in banknotes printed on Guardian® substrate.

All of the Verus devices are designed to:

- Check the authenticity of the currency
- Identify suspicious banknotes at the earliest transaction point
- Build confidence in the banknotes and their widespread deployment
- Provide comfort for new polymer users and support national education and communication strategy about new notes and materials
- Combat the threat of counterfeiting at all levels

Clearly Secure™

There are three Verus devices available, designed with specific end users in mind.

The Desktop Unit - Verus D is a compact unit developed for retail and higher value transaction points such as cashier till positions, ticketing offices, bank branches etc.

Verus D provides:

1. Enhanced functionality and compatibility with POS equipment
2. Support for cashiers and sales staff
3. Removal of threat of counterfeits at first point of passing
4. Ease of use and immediate confirmation
5. Recharging via industry standard USB cable
